EDUCATION

Purdue University

B.S., Computer Science

B.S., Artificial Intelligence

West Lafayette, IN

December 2026

GPA: 3.58

Relevant Courses: Analysis of Algorithms, Systems Programming, Artificial Intelligence, Data Structures and Algorithms

Skills: Python, Java, C, C++, C#, SQL, R, JavaScript, TensorFlow, PyTorch, Relational Databases, NoSQL Databases, Machine Learning, Artificial Intelligence, Nvidia Nemo Microservices, Computer Vision, CI/CD Pipelines, Google Cloud (GCP), AWS, OpenShift, Docker, Jira, Apache, Git

PROFESSIONAL EXPERIENCE

Kohl's – Kohls Technology

Software Engineer Intern

San Francisco, CA

June 2025 – August 2025

- Engineered a scalable high-performance backend for an ordering platform with RESTful API, leveraging Java Spring Boot, MongoDB, Google Cloud Spanner cloud databases, achieving 10% increase in responsiveness, 5% reduction in load times.
- Built logistics optimization algorithms using predictive modeling replacing SAS Optimization legacy system, boosting efficiency by 15%; analyzed feature adoption metrics using Qlik and BigQuery and presented insights to leadership.
- Developed intuitive frontend interfaces using Angular (TypeScript), enhancing Kohl's vendor order management, improving inventory tracking, vendor communication, and order accuracy.
- Modernized legacy CI/CD pipelines using GitLab Auto DevOps and container orchestration via Red Hat OpenShift (Kubernetes), accelerating deployments by 10% and improving system reliability; utilized Agile sprint planning and test-driven development for high-quality delivery.

Veygo Rentals – Car Rental Service

Full Stack Developer

West Lafayette, IN

August 2024 – May 2025

- Built a responsive, intuitive car-rental web app using React, Tailwind CSS, and Bootstrap, increasing user engagement by 30% among Purdue students; implemented real-time inventory tracking and automated booking confirmations.
- Engineered scalable backend services in Node.js and Python, integrating secure payment processing with Stripe API, user management via Firebase Authentication, and multi-tiered access controls, improving operational efficiency by 25%.

TransSIGHT – Data Consulting Firm

Data Engineering and Machine Learning Intern

San Francisco, CA

June 2024 – August 2024

- Built predictive machine learning models (Random Forest, XGBoost) using scikit-learn and PyTorch, increasing transit demand forecasting accuracy by 20%.
- Leveraged AWS (S3, Lambda) for scalable processing, optimized complex SQL queries enhancing database performance by 10%, and created detailed visualizations for actionable insights.
- Developed an automated end-to-end data pipeline using Apache Airflow, achieving a 30% reduction in ETL processing time, and managed Docker environments, resulting in a 15% improvement in deployment efficiency.

RESEARCH EXPERIENCE

BASF – Agricultural Chemical Solutions

Machine Learning Research Intern

West Lafayette, IN

August 2023 – May 2024

- Developed statistical models and predictive analytics using Python, scikit-learn, XGBoost, and Tableau, enhancing competitor market-share estimation accuracy by 15%, and delivering actionable benchmarking insights to senior management.

PROJECTS

Pantry Tracker App

- Built a responsive web app using React and Next.js for real-time pantry item tracking; implemented secure user authentication via Firebase and automated item addition using computer vision with OpenCV.

Machine Learning Assisted Professor Tracking App

- Developed a recommendation platform leveraging RAG with Pinecone Vector DB, Llama 3.1, and sentiment analysis techniques, enabling students to select classes based on reviews; implemented a weighted recommendation system for personalized professor suggestions.

AI Flashcard App

- Engineered an adaptive study platform integrating Llama 3.1 AI-generated content, adaptive learning algorithms to personalize flashcard difficulty, and secure user management with Clerk; enabled subscription payments using Stripe API.

C++ Shell Implementation

- Implemented a custom Unix-like shell in C++ utilizing Lex and Yacc for command parsing, featuring piping, I/O redirection, background execution, command and process substitution, built-in commands, and robust signal handling with resource management.

Custom C Compiler to x86-64 Assembly Implementation

- Designed a compiler using Lex and Yacc for lexical analysis and parsing, implemented precise register allocation, and generated optimized x86-64 assembly code from source programs.
